The e number is $\frac{N}{1296}$ then N is (D) 7 <sup>2</sup> I 7 republicans so that atleast e ways it can be done, is (D) 8008
18. 19. 20.	Number of 6 digit num (A) 56 A team of 8 students of internal arrangement i (A) 91 Four people sit round a probability that no two divisible by : (A) 3 A committee of 10 met two members of each (A) 28( <sup>13</sup> C <sub>3</sub> ) If w is imaginary cube	the form th	(C) $\left(\frac{1}{2}\right)^{10}$ ed if the sum of their digi (C) 36 two cars, of which one c natter then the number of (C) 126 n person will roll a normal ach other will roll the sam (C) 9 among 9 democrats and nittee. Number of possibl (C) $^{16}C_{10} - 7$	ts has to be 51, is (D) 30 can seat 5 and the other only 4. If ways in which they can travel, is (D) 3920 I six sided die once. The e number is $\frac{N}{1296}$ then N is (D) 7 <sup>2</sup> I 7 republicans so that atleast e ways it can be done, is (D) 8008 + b  = 1 then

**22.** The number of ordered quadruples  $(a_1, a_2, a_3, a_4)$  of positive odd integers that satisfy  $a_1 + a_2 + a_3 + a_4 = 32$  is equal to :

(A) 
$${}^{31}C_3$$
 (B)  ${}^{17}C_3$  (C) 4495 (D)  $\frac{9}{2}({}^{17}C_3) - {}^{17}C_4$ 

23.If polynomial of the form  $x^3 + ax^2 + bx + c$  is divisible by  $x^2 + 2$ , then<br/>(A) b = 1<br/>(C) 2a = c(B) b = 2<br/>(D)  $n\{(a, b, c) : a, b, c \in N; a, b, c \le 3\} = 1$ 

**24.** A player throws an ordinary die with faces numbered 1 to 6. Whenever he throws 1, he has a further throw. If P(n) is the probability of getting a total score of n then

(A) 
$$P(5) = \frac{1}{5} \left( 1 - \frac{1}{6^4} \right)$$
  
(B)  $P(5) = 5 \left( 1 - \frac{1}{6^4} \right)$   
(C)  $P(8) = \frac{1}{180} \left( 1 - \frac{1}{6^5} \right)$   
(D)  $P(8) = \frac{1}{180} \left( 1 - \frac{1}{6^4} \right)$ 

**25.** If two events A and B are such that  $P(A^c) = 0.3$ , P(B) = 0.4 and  $P(A \cap B^c) = 0.5$ , then

(A) 
$$P\left(\frac{B}{A \cup B^{c}}\right) = 0.25$$
 (B)  $P(A/B) = 0.5$   
(C)  $P(A/B^{c}) = 5/6$  (D)  $P(\text{neither A nor B}) = 0.2$ 

**26.** There is a group of 6 persons. They play a game in which each has to select a number from 1 to 4. Let  $A_n$  is event that n persons have selection of same number, then

(A) 
$$P(A_5) = \frac{18}{4^6}$$
  
(B)  $P(A_5) = \frac{18}{4^5}$   
(C)  $P(A_6) = \frac{1}{4^5}$   
(D)  $P(A_5 / A_6) = \frac{1}{2}$ 

**27.** For any two events A and B,  $P(A \cap B)$  is (A) Not less than P(A) + P(B) - 1

(C) Equal to  $P(A) + P(B) - P(A \cup B)$  (D) Equal to  $P(A) + P(B) + P(A \cup B)$ 

(B) Not greater than P(A) + P(B)

- **28.** One die has three faces marked 1, two faces marked 2 and one face marked 3. Another has one face marked 1, two faces marked 2 and three faces marked 3 then
  - (A) The most probable throw with two dice is 4
  - (B) The probability of most probable throw is 1/4
  - (C) The probability of most probable throw is 7/18
  - (D) None of these

**29.** For the 3 events A, B and C, P (at least one occurring) =  $\frac{3}{4}$ , P (at least two occurring) =  $\frac{1}{2}$ 

and P (exactly two occurring) =  $\frac{2}{5}$ . Which of the following relations is / are **CORRECT**?

(A) 
$$P(ABC) = \frac{1}{10}$$
  
(B)  $P(AB) + P(BC) + P(CA) = \frac{7}{10}$   
(C)  $P(A) + P(B) + P(C) = \frac{27}{20}$   
(D)  $P(A\overline{BC}) + P(\overline{ABC}) + P(\overline{ABC}) = \frac{1}{4}$ 

**30.** Each of 2010 boxes in a line contains one red marble, and for  $1 \le k \le 2010$ , the box at the k<sup>th</sup> position also contains k white marbles. A child begins at the first box and successively draws a single marble at random from each box in order. He stops when he first draws a red marble. Let P(n) be the probability that he stops after drawing exactly n marbles. The possible value(s) of n for which 1

$$P(n) < \frac{1}{2010}$$
, is  
(A) 44 (B) 45 (C) 46 (D) 47

31.	Let all letters of word 'l defined as :	MATHEMATICS' are arra	anged in all possible	order. Three events A, B and C are
	A : Both M are togethe Which of the following		-	: Both A are together
	(A) $P(A) = P(B) = \frac{2}{11}$		(B) P(A ∩ B) = P(B	$B \cap C$ ) = P(C $\cap A$ ) = $\frac{2}{55}$
	(A) $P(A \cap B \cap C) = \frac{4}{49}$	4 95	(D) P((A∩B̄)   C̄) =	$=\frac{58}{405}$
32.	possible seating arrang	gements of persons in ro	om A when n perso	spectively. A <sub>n</sub> denotes the number of ons are to be seated in these rooms, $_{n-1} = 25! ({}^{49}C_{25})$ then n is divisible by (D) 6
33.	The number of sides or of sides can be : (A) 6	f a polygon in which the (B) 7	number of diagonals (C) 8	is at least 10 more than the number (D) 9
Comp	rehension # 1 (For Q. 3	34 to 36)		
		are divisors of number N enumber and $1 < \alpha_1 < \alpha_2$		
34.	The value of k is :			
		(B) 2 <sup>n</sup>	(C) 2n	(D) None of these
35.	The value of $1 + \frac{1}{\alpha_1} + \frac{1}{\alpha_2}$	$\frac{1}{\alpha_{k}} + \dots + \frac{1}{\alpha_{k}}$ is :		
	(A) 2	(B) 3	(C) k	(D) k + 1
36.	Number of ways to exp (A) 1	oress N as a product of tw (B) 2	vo co-prime factors i (C) 4	s (D) 8
37.				f possible sets of 6 cards that can be

**37.** A game uses a deck of n different cards with  $n \ge 6$ . If the number of possible sets of 6 cards that can be drawn from the deck is 6 times the number of possible sets of 3 cards that can be drawn then the sum of the digits of n is

**38.** If A be any event in sample space the maximum value of  $3\sqrt{P(A)} + 4\sqrt{P(\overline{A})}$  is

- **39.** Let  $f(x) = ax^4 + bx^2 + 3x + 7$  such that f(-4) = 2286 and f(4) = N. Find number of ways in which the number N can be resolved as a product of two divisors which are relatively prime.
- **40.** Find the number of different four digit numbers which can be made out of one 1, two 2's, three 3's and four 4's.
